TECHNICAL SKILLS

Expert

- ▶ PHP · Laravel · CodeIgniter
- ▶ Node.js · JavaScript
- ▶ REST API Design & Versioning
- ▶ AWS Lambda · SQS · S3 · API GW
- ▶ MySQL · Redis Cluster

Proficient

- ▶ Kubernetes (K8s) · Docker
- ▶ ElasticSearch · Firebase
- ▶ CI/CD · GitLab Pipelines
- ▶ Graylog · CloudWatch
- ▶ Payment Gateways (Razorpay, Adyen, Mews)

Familiar

- ▶ Python
- ▶ HTML · CSS · jQuery
- ▶ JIRA · Scrum · Agile

EDUCATION

MCA

Kurukshetra University | 2019–2021

BCA

Kurukshetra University | 2016–2019

KEY

ACHIEVEMENTS

- 📌 Promoted Junior → Senior in 1.5 yrs
- 📌 30%+ AWS cost reduction
- 📌 APIs serving 2M+ daily orders
- 📌 Led team of 4–6 engineers
- 📌 50+ third-party integrations
- 📌 ~40% faster incident resolution
- 📌 99.9% uptime on booking platform

PROFESSIONAL SUMMARY

Senior Software Engineer and emerging Technical Lead with 5+ years of experience building enterprise-grade, cloud-native systems at Ashriya Infotech. Expert in serverless AWS architectures, Kubernetes orchestration, and high-throughput API design for platforms processing 2M+ daily transactions. Led a team of 4–6 engineers, mentored 5+ developers, and consistently delivered projects that reduced costs and improved system reliability. Targeting Lead / Principal Engineer roles at product-driven enterprises where I can architect scalable systems and drive engineering excellence.

PROFESSIONAL EXPERIENCE

Senior Software Engineer → Tech Lead

Ashriya Infotech | March 2021 – Present (5+ Years)

Technology company specialising in cloud-native software, enterprise APIs, and digital transformation for global clients.

- Promoted from Junior to Senior Developer within 1.5 years — fastest progression in the engineering team — recognised for exceptional delivery quality and ownership.
- Led a cross-functional team of 4–6 engineers across multiple concurrent client projects, owning sprint planning, code reviews, technical decisions, and on-time delivery.
- Mentored 5+ junior and mid-level developers, establishing code review standards and engineering best practices adopted across the team.
- Architected serverless systems on AWS Lambda, API Gateway, and SQS — reducing infrastructure overhead by ~40% and enabling auto-scaling to handle traffic spikes with zero manual intervention.
- Reduced AWS operational costs by 30%+ by designing a custom distributed caching layer using Redis Cluster, eliminating redundant downstream calls.
- Built and maintained N-layered RESTful APIs serving 2M+ daily orders with average response times under 100ms and 99.9% uptime SLA.
- Deployed and managed containerised microservices on Kubernetes (K8s), configuring HPA, ingress controllers, and rolling deployments for zero-downtime releases.
- Integrated ElasticSearch for full-text search and cross-service data sync, reducing search query times from ~800ms to under 50ms on large datasets.
- Managed end-to-end payment gateway integrations — Razorpay, Adyen, N-Genius, Mews — handling secure multi-currency transactions across global enterprise clients.
- Implemented centralised Graylog logging + CloudWatch alerting, cutting mean time to incident resolution (MTTR) by ~40%.
- Drove CI/CD pipeline adoption on GitLab, reducing deployment time from hours to under 15 minutes with automated test gates and rollback triggers.
- Managed API versioning lifecycle (v3.0 to v3.8) ensuring 100% backward compatibility across all active client integrations.

PROJECTS

Minglo — B2B Event Networking Platform

Stack: Node.js, AWS Lambda, API Gateway, Redis, MySQL, ElasticSearch

- Built core backend APIs powering smart attendee matchmaking, conflict-free 1:1 meeting scheduling, lead scanning, and sponsor visibility for large-scale B2B conferences and AGMs.

CORE STRENGTHS

Technical Leadership

Led cross-functional teams of 4–6 engineers, driving delivery of high-impact enterprise products.

Scalable Cloud Architecture

AWS serverless + Kubernetes for systems handling millions of daily transactions.

Cost & Performance

30%+ cloud cost savings; sub-100ms API response times under peak load.

Mentorship

Mentored 5+ junior developers; established coding standards adopted team-wide.

- Designed algorithmic matchmaking engine processing 10,000+ attendee profiles per event, delivering personalised recommendations with sub-200ms response times.
- Integrated Elasticsearch for fast delegate discovery across large datasets and Redis to cache hot matchmaking results, reducing DB load by 60%.
- Platform served international enterprise conferences with thousands of simultaneous users and zero reported downtime during live events.

Monsscent — Fragrance Subscription eCommerce

Stack: *Laravel, PHP, MySQL, AWS S3, Razorpay, REST APIs*

- Developed backend for a Spanish premium fragrance subscription platform offering 300+ brands (Chanel, Gucci, Cartier, Prada) at €15.99/month.
- Built subscription lifecycle APIs — plan selection, personalised monthly calendars, promo code engine (e.g. 25% welcome discount), recurring billing, and cancellation flows.
- Engineered a fragrance quiz/recommendation engine matching user preferences to catalogue of 300+ SKUs, increasing conversion rate on sign-up flow.
- Implemented multilingual support (ES/EN), AWS S3 for product media, and SEO-friendly URL architecture for organic discoverability.

Neutral Air Partner — Air Cargo Logistics Ecosystem

Stack: *PHP, Laravel, Node.js, AWS, MySQL, REST APIs*

- Built backend for a global air cargo logistics platform connecting aviation specialists across 6 specialist networks (NAC, NAV, NAF, NEX, NAS, and more).
- Developed member portal (NAP Hub), event management system (OPENAP conference), network directory, and membership subscription APIs used by logistics professionals worldwide.
- Integrated third-party aviation data systems for reliable cargo data exchange, supporting high-availability access for an international professional membership base.
- Optimised portal performance for global traffic with caching and query tuning, achieving consistent sub-300ms page API response times.

Ticket Booking Platform — 2M+ Daily Transactions

Stack: *Node.js, AWS Lambda, SQS, Redis, Elasticsearch, Graylog, CloudWatch*

- Architected and led development of a high-volume ticket booking engine handling 2M+ daily orders with 99.9% uptime and sub-100ms average API response time.
- Integrated 50+ third-party booking systems via Lambda functions, supporting real-time online and offline channel synchronisation with zero critical failures post-launch.
- Implemented Graylog + CloudWatch observability stack, reducing MTTR from ~2 hours to under 30 minutes for production incidents.
- Managed full API versioning lifecycle (v3.0–v3.8), ensuring backward compatibility across all active third-party integrations.

Kubernetes Microservices Deployment

Stack: *Kubernetes, Docker, AWS EKS, CI/CD, GitLab*

- Designed and deployed containerised microservices on Kubernetes (AWS EKS), configuring deployments, services, ingress, and HPA for production-grade auto-scaling.
- Reduced deployment time from ~2 hours manual to under 15 minutes via GitLab CI/CD pipelines with automated builds, health checks, and zero-downtime rolling updates.
- Monitored cluster health and resource utilisation with CloudWatch and K8s-native tooling, maintaining stable pod performance under variable load.

Hospital Management System

Stack: *Laravel, PHP, AWS S3, Lambda, SQS, Razorpay, MySQL*

- Built comprehensive HMS covering multi-supplier inventory, medicine sales, billing, stock replenishment, and reporting for hospital operations.
- Automated billing and stock workflows, eliminating manual data entry errors and reducing administrative processing time by ~50%.
- Integrated Razorpay payments, AWS S3 for document storage, and Lambda/SQS for background job processing at scale.
